

CARDIO_{pro}

For the characterization of familial cardiovascular diseases

4bases CARDIO pro is a **CE-IVD capture-based kit** designed for the comprehensive **genetic characterization of familial cardiovascular diseases**.

It includes **232 curated genes** (coding regions + 100 bp padding) linked to cardiomyopathies, channelopathies, rare cardiac conditions, and hereditary aneurysmal syndromes, following current clinical guidelines (e.g. ClinGen), with optional coverage of mitochondrial genes (ref. MitoMap).

The kit enables the detection of SNVs and CNVs through **Next Generation Sequencing (NGS)** from germline DNA samples (blood or tissues).

Curious about the full gene list? Contact our support team for the complete panel details.

CARDIO_{pro}

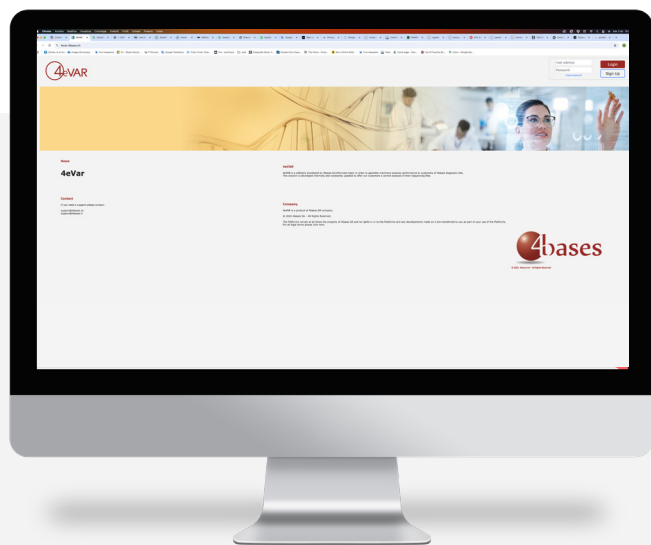

For the characterization of familial cardiovascular diseases

Specifications

Sample type	DNA extracted from tissues, blood or body fluids
Input	Minimum of 50 ng DNA per sample
Panel size	About 750 kb
Variant called	SNPS, indels, CNVs
Instrument Type	Illumina, MGI, Oxord Nanopore Technologies, Ion Torrent, Element Biosciences
Data Analysis	4eVAR
Automation version	Available

Cod. kit

Product	Cod.	Tests number
CARDIO pro	C3140	16 & 96
CARDIO pro Automatic	C3140A	16 & 96

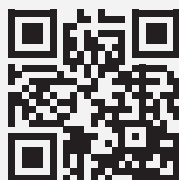

4eVAR: Comprehensive output files for analysis and reporting

- Quality metrics
- Alignment
- CNVs status
- Full variant table
- Genotype
- Coverage
- Mitochondrial analysis
- Customizable report

Data Analysis

Product	Cod.	Tests number
4eVAR	A6060-C3140-16	16
4eVAR	A6060-C3140-96	96
